

Download git bash from <https://git-scm.com/downloads> , and install it in the recommended way.

If you are a Mac user, you can directly work with the terminal. No need to explicitly install git bash. If you are facing any issue using git command then follow the steps on <https://git-scm.com/download/mac>

Open the given url and click on the “clone” icon. Then select https tab. Now you can copy the https link as follows.

Now you can open git bash or mac terminal, and then type the following command to clone the project to your machine.

**git clone https://github.com/skelagallage/march2024\_day01.git**

Now open the project using IntelliJ and open the IntelliJ terminal. Type following command to load the correct git branch and hit enter.

```
15         m3.eat(foodBanana);  
16     }  
17 }
```
