

Set up Appium

- **project dependencies**

Java-client : Take the following java-client dependency

The screenshot shows the Maven Repository page for the artifact `io.appium:java-client`. The page includes a search bar, a sidebar with popular categories, and a main content area with details about the Java Client. The details section shows the license as Apache 2.0, tags as client, ranking as #1664, and used by 278 artifacts. A table lists the versions available in the Central repository.

Version	Vulnerabilities	Repository	Usages	Date
9.0.x	9.0.0	Central	11	Oct 14, 2023
8.6.x	8.6.0	Central	5	Oct 09, 2023

Selenium-support : Take the following selenium-support dependency

The screenshot shows the Maven Repository page for the artifact `org.seleniumhq.selenium:selenium-support`. The page includes a search bar, a sidebar with popular categories, and a main content area with details about Selenium Support. The details section shows the license as Apache 2.0, tags as support, selenium, and testing, ranking as #1344, and used by 355 artifacts. A table lists the versions available in the Central repository.

Version	Vulnerabilities	Repository	Usages	Date
4.15.x	4.15.0	Central	2	Nov 01, 2023
4.14.x	4.14.1	Central	7	Oct 12, 2023

TestNG : Take the TestNG from org.testng as previously we did.

- I have provided a class project which uses Page Object Model.
